NUTRITION TIP OF THE WEEK FROM THE KSC FITNESS CENTERS: How to Increase Omega-3 Fats in your diet. Omega-3 fatty acids are touted for their beneficial roles in improving cardiovascular health. There are many ways to incorporate them into your diet easily.

- Eat more fish: salmon, trout, halibut, sardines, and tuna.
• Get nutty--try walnuts.
• Consume more green leafy vegetables.
• Use Canola oil or soybean oil in place of other cooking oils.
• Eat flax seed. Grind the seeds and add them to a salad.
• Buy a supplement. When food sources aren't an option, fish oil capsules can be purchased.
• Consider functional eggs. Although they cost more than regular eggs, you can now purchase omega-3 rich chicken eggs. (Omega three enriched eggs are produced by altering the diet of laying hens. Hens are fed a special diet which contains 10-20% ground flaxseed. Flaxseed is higher in Omega-3 fatty acids and lower in saturated fats than other grains. As a result, the eggs produced from hens on this formula are higher in Omega-3 fatty acids. The total cholesterol and fat content, however, remain the same.) http://www.eggs.ca/pdf/omega-3_e.pdf.
