**NUTRITION TIP FROM THE KSC FITNESS CENTER:** Fruits and vegetables can provide hidden health benefits. Fruits and vegetables provide many health benefits. Most people know about the vitamin C found in oranges or the beta carotene in carrots. But don't overlook the hidden benefits of resveratrol, lycopene and anthocyanin. These compounds are among the ever-increasing number of phytochemicals whose existence and roles in nutrition and health are being discovered by researchers. Phytochemicals are the ingredients in fruits and vegetables that appear to promote health, such as by slowing the aging process or reducing disease risk. They include:

- Lycopene, found in tomatoes, watermelon and pink grapefruit, which may aid in reduction of prostate cancer and heart disease.
- Anthocyanin, found in blueberries, blackberries, cherries, kiwi, plums and eggplant, which may help reduce the risk of cancer and may prevent urinary tract infections.
- Resveratrol, found in red grapes, wine and peanuts. Resveratrol may help reduce the risk of heart disease and cancer.

These health-promoting compounds are more reasons why we should all make consumption of 5-A-Day of fruits and vegetables a priority.
